PREFACE

This publication was prepared by the Research and Development Section of the Colorado Division of Employment and Training, in cooperation with the Employment and Training Administration, U. S. Department of Labor. It is one of several reports published periodically and provides historical, current, and projected labor market information, including the outlook for the Colorado economy, as well as population and labor force estimates, industry and occupational employment outlook, and an analysis of job openings received and services to registered applicants in Colorado Job Service Centers.

It is hoped that this information will be of value to officials and persons with responsibilities for the development and implementation of employment and job-training programs.

Comments, suggestions, and questions regarding content and format are invited and may be addressed to:

NATIONAL ECONOMIC FORECAST
1983-1988

The national economy is poised for an upturn in 1983.

The elements are in place for economic expansion, but the gains will be gradual, unlike the seven previous recoveries since World War II.

INTEREST RATES - Further gradual declines will probably continue because economic stimulus both nationally and internationally is dependent on lower rates. Rather than allow rates to move upward, the Federal Reserve will adjust money supply policy. The high cost of money as experienced during this recession has had a deleterious result abroad as well as at home. Prevention of a world wide depression will be the leading pressure point to keep interest rates down.

INFLATION - A consumer price index of 4 - 7 percent can be expected during the next several years.

UNEMPLOYMENT - Moderately high rates of unemployment will be with us for 1983 and much of 1984, and then decreases will become apparent.

The reasons for this scenario are several: a gradual recovery rather than a boom type of expansion is expected; the fact that industry has been operating at about 68% of capacity will force management to increase productive levels before new hires will be taken on; as an economy begins to expand, many discouraged workers (those who want a job but feel there are none available) come back into the labor force, thereby expanding the number of unemployed; also in this vein, those new entrants and reentrants who also wanted a job during the recession but stayed out of the labor force because they felt there were no jobs will also increase the numbers in the labor force. All this activity tends to keep the unemployment rate high for some time after the economy is on the upswing.

CAPITOL SPENDING - Until such time as industry operation is increased from the low 68% capacity of 1982, investment in plants and equipment will be held to a minimum. Expansion will probably rise very slowly in 1983 and gain momentum in 1984 and 1985.

IMPORT/EXPORT - 1983 will see little improvement in our trade imbalance. However, with a scenario of continued low interest rates, and controlled inflation, the high cost of the dollar should gradually decline, making for a more favorable balance of trade in 1984, 1985 and forward.

FEDERAL BUDGET DEFICIT - Fiscal and monetary policy plus congressional legislation will force down the federal deficit by 1984 and 1985. Such action is vital so that a worldwide depression can be avoided.

Recovery therefore will take place during this next five years, but it will be gradual. In some instances such as private housing construction and auto manufacturing, percentage gains may actually seem large, but these gains will have to be viewed in the context of the very depressed base of the recession trough.

NATIONAL INDUSTRY OUTLOOK

The structure of industry employment has been changing in recent decades. Growth in the service-producing industries has been much more rapid than in the goods-producing industries. In 1972, mining, construction and manufacturing comprised approximately 32% of nonagricultural wage and salary employment. In 1982, these same industries had 27 percent of the employment and the outlook for 1988 is about the same. The service producing industries employed 68 percent of the total in 1972 and recorded 73 percent in 1982. That proportion is expected to continue into 1988.

Manufacturing industries suffered the greatest losses in employment and this trend is expected to continue while services, particularly business, health, miscellaneous services and information services employment, showed the most pronounced increases. It is unlikely that the production of durable goods will return to the high rates of growth experienced in the 60's and 70's. Foreign market competition, union pay scales, and antiquated factory systems have forced these industries into redesign, automation, use of robots and computers and reorganization. The short term will, therefore, show small growth and the long term will mark some increased growth in employment. The outlook for the flourishing heavy industries of the 60's and 70's is more akin to agriculture when the industrial revolution arrived. Slower growth in the 80's and 90's appears on the horizon for heavy industry.

Growth in specific industries will reflect changing priorities and value systems. As real incomes rise, purchase of food for home consumption will level off. This slowdown will affect almost all the food industries and the agricultural industries indirectly.

Production of alcoholic beverages and soft drinks will be the two leading growth industries in the food sectors.

In other nondurable manufacturing sectors, chemical products, drugs, apparel and printing & publishing will post faster than average growth; while tobacco, paper products, cleaning preparations, and leather products will exhibit moderate growth and refined petroleum products are assumed to actually decline.

Those industries in the durable goods sector expected to post substantial growth are computers (micro-especially), optical equipment, construction, mining and oilfield machinery, office equipment, electronic components, photographic equipment, and medical and dental equipment.

Services industries are expected to continue their share of employment with the following industries posting rapid growth: amusement and recreation, health, miscellaneous business and professional services and automobile repair.

Private households, motion pictures and forestry and fishery will exhibit very slow growth.

Government will continue its decelerated growth rates as exhibited during the past decade.

The gross national product during the 1983-1988 period should expand at an annual rate of about 3.5 to 6.0 percent. It is not apparent at this writing that taxes will be reduced at a rate expected in the early 1980's; therefore, a slow rate of investment by corporate entities can be expected. It is projected that by 1990, taxes, both personal and corporate, will be reduced somewhat, spurring capitol investment again.

Labor productivity should increase due to the reorganization and automation taking place, as well as the fact that the baby boom generation will be a part of the experienced labor force and there will be a drop in the inexperienced labor force entrants.

COLORADO
INDUSTRY EMPLOYMENT OUTLOOK
MAJOR DIVISION ANALYSIS

Significant policy shifts at the national level that began in August of last year have provided the initial push needed to bring about upturns in both the national and Colorado economies during fiscal years 1984 and 1985.

Primarily because of perceived international debt repayment problems, United States monetary policy began to be significantly less restrictive during the last summer of 1982. This major policy shift provided an economic setting wherein national fiscal and monetary policies were again working in concert, rather than pulling the economy in oppostive directions as was the case prior to this major policy shift.

Additionally, during the very early months of the current year, economic growth was beginning to be given a higher priority at the national level than was deficit reduction. It was becoming more apparent to members of the House and Senate that there would have to be economic growth if there was to be a deficit solution.

Given the economic posture that was, for the most part, embraced by Congress during the past two years, policy changes of this magnitude will have obvious positive impacts on both our national and local economies. Politics will continue to attempt to control both economies, but in ways opposite those experienced during 1982.

The Mining Industry

Faced with declining oil prices, substantial uranium inventories, a steel industry operating at less than fifty percent capacity and softening electrical energy demand, Colorado's mining industry stumbled and staggered through most of 1982. Although some improvement in the employment picture is expected during the forecast period, compared to some recent past performances by this major division the growth expected will be moderate.

Helping to initiate a slow recovery in the coal mining sector is the anticipated increase in electricity sales as the general economic upturn broadens and intensifies. Operating levels in the steel industry somewhat higher than the '82 experience should help to stop the employment losses being experienced in the molybdenum portion of the metals sector. The uranium portion of metals, however, is expected to continue to be depressed because of very high inventories.

Although hard hit by decreasing demand and lower oil prices, companies in the oil and gas extraction sector are finding their drilling costs to be substantially less than the levels faced a year ago. Many of the more stable companies, therefore, are expected to maintain a relatively high level of exploration during the forecast period.

Taken as a whole, this major division should generate about 1100 new jobs in FY '84 and an additional 2300 in FY '85.

The Construction Industry

Although some job losses will be experienced in the heavy construction and nonresidential sectors, overall employment should increase in this major division during both FY '84 and FY '85.

On the negative side, a large number of construction jobs will be phased out as one major oil shale project is brought on line during the fall of '83. Employment adjustments will also continue to be made in Denver's downtown office construction economy. Helping to offset some of the heavy construction and nonresidential adjustments will be the start-up of the Consolidated Space Operation Center activity, and additional jobs created by expenditures resulting from the recent federal gasoline and diesel fuel tax hikes.

Good growth in the residential sector should continue during both fiscal years as moderately lower residential mortgage rates attract additional new home buyers to the residential housing market.

The assumption of moderating mortgage rates should not be viewed as incompatible with the short-term expansionary policies being set in place at the national level. Deficit size and monetary and tax policies would seem to be less relevant in determining the parameters of a particular business cycle (particularly during the recovery phase) than is consumer sentiment as reflected in the velocity function.

In 1982, unlike recessions of the recent past, new industries (government) and new occupations (middle management) became casualties in the layoff process and blue collar workers whose previous experiences had conditioned them to view layoffs as a temporary phenomenon, were being told that many, if not most, would be facing permanent structural (as opposed to temporary cyclical) unemployment. Given this most recent experience any new purchasing power that, by whatever means, is pumped into the economy can be expected to move through the economic structure at a much slower pace than past historical experience would dictate. Other than for housing, the consumer will be particularly cautious in his use of credit. Some credit expansion will, of course, take place. But relative to the experience of past recovery periods, at a much slower pace. This is expected to have a moderating influence on both short and long term interest rates for at least the next 12 to 18 months.

The Manufacturing Industry

A number of negative factors will continue to hold down growth rates in this major division during FY '84. Accelerating competition both internationally and from other states, changing consumer demand, a softening of heavy and nonresidential construction, and a strong dollar are expected to keep growth rates under two percent. However, FY '85 growth should be about double the FY '84 experience as productivity gains brought about by an economy experiencing severe disinflation makes this sector's output more competitively priced and more affordable to the consumer.

As in the recent past, gains in both fiscal years should be concentrated in Machinery, Except Electrical; Printing and Publishing; and Electrical and Electronics Machinery. As the economy gains momentum in FY '85, Food and Kindred Products; Rubber and Miscellaneous Plastic Products; Fabricated Metal Products; and Instruments and Photographics should experience moderate gain in employment.

The necessity for this industry to have its output competitively priced during the next two years will limit substantially the number of new jobs that will be created relative to past recovery periods. During the past four years, a significant amount of redundant employment in the American economy was being supported by very high inflationary rates. With the onset of disinflation, this redundancy was rather dramatically exposed via, for example, substantial middle management layoffs. It is assumed that in the near term, the caution being exhibited by the consumer will be further reflected in the hiring rates of the business community as the economy continues to advance along the recovery phase of the business cycle.

The Transportation and Public Utilities Industry

The competitive shakeout of a major portion of this industry, brought on by the recession and deregulation will continue during FY '84.

Even with the merging and chapter 11 activity of the past year, over-capacity remains significant in the airline transportation sector. Reluctant consumers who in 1983 had to be enticed into flying by very generous fare discounting are not expected to increase their usage by much as presumed fare increases are brought on line during the coming fiscal year. Somewhat less competition, a more efficient cost structure and a continually improving economy should help to generate substantially more new job opportunities in FY '85 than will be the case in the FY '84 period.

Partial deregulation and the recession also continue to plague the trucking and warehousing sector. As with the airline industry, reduced costs, less competition and an expanding economy are needed to bring an economic turnaround. Because of the many small units involved, improvement is expected to be erratic with very few new jobs being offered in either fiscal year.

As increased productivity decreases the demand for labor in some areas of the communications sector, deregulation and rapid technological change in other areas are significantly expanding the communication services being made available to the public. Over all, employment is expected to show moderate increases during both fiscal years.

The Trade Industry

Many of the discretionary purchases that were made in this industry during the past year were made only after the wholesaler or retailer had made significant price concessions. With leaner inventories and pricing strategies directed to again making a profit, comparable concessions will be less evident in the coming months. Couple this pricing strategy with a consumer confidence level that is something less than dynamic and you have an environment that would suggest recovery growth rates in this industry to be about half the rates experienced during the recovery following the '74-'75 downturn.

In FY '84, look for softening or negative growth rates in the motor vehicle, tires and tubes, electrical goods, and machinery, equipment sector of wholesale trade. In the retail portion, eating and drinking places, apparel, department stores, auto dealers, and gasoline service stations should experience slower or negative growth rates.

With an election coming up and the secondary demands being generated by an expanding residential construction sector, employment growth in the trade industry should accelerate in fiscal 1985. A growth rate of between four and five percent is anticipated.

The Finance, Insurance and Real Estate Industry

Continued deregulation in many sectors of this industry is causing consolidation efforts that tend to reduce employment opportunities. At the same time, this same deregulation is fostering increased competition which tends to increase job opportunities in the short term.

Through FY '85 it is expected that the competitive response to the deregulatory environment will outpace consolidation efforts. Add to this response the effects of an expanding residential construction sector and a moderately improving economy, and we should have an average employment growth rate in this industry during the next two fiscal years of about 3.5 percent. This is substantially below the approximately 6 percent average rate experienced during the recovery years of 1976 and 1977.

A number of factors, some of which have been described under previous major divisions analyses, will be responsible for the expected lower growth rates. As with other industries, intensifying cost pressures will slow hiring efforts during this recovery. The merging of separate financial entities into one major company will have an obvious effect on employment levels. The trend toward increased automation through the use of advanced electronic equipment has, and will continue to eliminate many jobs in this industry...and finally, growth rates in this industry will be held back by the expected pace of the overall economic recovery.

As with the airline and trucking industries, the new jobs created by the competitive function will, for the most part, result from redundant efforts rather than responses to an increase in effective demand. When the deregulation dust settles, we can expect additional employment adjustments.

The Service Industry

Although a number of factors can be listed as causing or requiring the '81-'82 downturn, the one that would seem to stand out above all others would be the bloated cost structure of American business, both public and private. Excessive costs were affecting both the national and local economies in three very negative ways: (1) Both economies were able to compete less effectively in international markets. (2) As this cost structure wound its way through both economies increasing numbers of consumers could not afford or could not qualify to purchase the outputs of important sectors of each economy. (3) As costs escalated, more of our domestic markets were relinquished to foreign competition.

The obvious, but not necessarily correct, response to this economic dilemma was a very strong disinflationary purge particularly in terms of labor resources. This purge is expected to continue well into FY '85.

Given this background, it would seem that the Service industry, normally a laggard in its entry into the recovery phase of the cycle, will, because of continuing cost cutting by business, be even more susceptible than most of the other major divisions to significant modifications in its growth rate during the coming months. Particularly strong modifications are anticipated in the business and health service sectors where rates are expected to be less than half the levels experienced during the recovery from the '74-'75 downturn.

In summary, fiscal 1984 is expected to produce relatively slow growth in the number of new job opportunities being generated by the Colorado economy. Belt tightening by business, both public and private, coupled with a hesitant consumer will keep growth around the 3 percent level. Interest rates should continue to moderate and inflation, as measured by the CPI, should average about 4 percent. Net immigration, a very important factor in generating new jobs, is expected to be an anemic 18,000.

Fiscal 1985 looks a little better. Increasing profit levels should help to mitigate the hesitency to hire that was being experienced in FY '84. The moderating interest rates of last year should help bring the dollar down thereby improving our export markets. Lower rates should also help to accelerate the use of consumer credit. The residential housing pickup that is expected in FY '84 should strengthen the seconuary demand function. Net immigration should expand to around 30,000. And last but not least fiscal 1985 is, of course, an election year.

COLORADO
MAJOR INDUSTRY DIVISION FORECASTS
FY 1983-84-85*

	(Preliminary) Fiscal 1983	(Forecast) Fiscal 1984		(Forecast) Fiscal 1985	
		Actual	Percent Ch.	Actual	Percent Ch.
Mining	41500	42600	2.6%	44900	5.4%
Construction	80000	82300	2.9	85500	3.9

NATIONAL OCCUPATIONAL EMPLOYMENT OUTLOOK

The job market is constantly in a state of change. Changes in size, age structure, and geographic location of the population; new technology and business practices; changes in the needs and practices of the public are some of the causes that alter the economy and affect employment opportunities in all occupations:

- Population growth spurs the need for more housing, medical care, education and other services and goods.

- New technology such as the computer has resulted in the burgeoning need for computer programmers, systems analysts, peripheral equipment operators, and at the same time has decreased the need for inventory clerks, bookkeepers, and other clerical workers.

- Changed organizational structures have had similar effects, such as the centralization of credit offices have reduced the demand for retail credit managers.

Between 1980 and 1990 the following growth rates are anticipated for the United States:

Professional, Technical Workers	20-26%
Managers and Administrators	13-21%
Clerical Workers	19-27%
Sales Workers	19-28%
Craft Workers	18-37%
Service Workers	24-32%
Farm Workers	-10- -18%

At the minimum rate expected, service workers would lead all occupational groups at 24%, with managers and administrators trailing at 13%. At the maximum expectations, craft workers at 37% would lead the growth rates and managers showing the smallest growth rate of 21%. Farm worker employment will continue to decline as has been the trend for the last two decades. White collar workers will comprise approximately 51% of all workers by 1990, blue collar workers 32% and service workers about 16%.

The following lists of specific occupations indicate highest growth rates and those occupations expected to generate the largest number of new jobs.

Occupation	Percent growth in employment, 1978-90
Data processing machine mechanics	147.6
Paralegal personnel	132.4
Computer systems analyst	107.8
Computer operators	87.9
Office machine & cash register servicers.	80.8

Computer programmers	73.6
Aero-astronautic engineers	70.4
Food preparation & service workers, fast food restaurants	68.8
Employment interviewers	66.6
Tax preparers	64.5
Correction officials & jailers	60.3
Architects	60.2
Dental hygienists	57.9
Physical therapists	57.6
Dental assistants	57.5
Peripheral EDP equipment operators	57.3
Child-care attendants	56.3
Veterinarians	56.1
Travel agents & accommodations appraisers	55.6
Nurses' aides & orderlies	54.6

Occupation	Growth in Employment (in thousands) 1978-90
Janitors & sextons	671.2
Nurses' aides & orderlies	594.0
Sales clerks	590.7
Cashiers	545.5
Waiters/waitresses	531.9
General clerks, office	529.8
Professional nurses	515.8
Food preparation & service workers, fast food restaurants	491.9
Secretaries	487.8
Truck drivers	437.6
Kitchen helpers	300.6
Elementary school teachers	272.8
Typists	262.1
Accountants & auditors	254.2
Helpers, hand	232.5
Blue-collar worker supervisors	221.1
Bookkeepers, hand	219.7
Licensed practical nurses	215.6
Guards & doorkeepers	209.9
Automotive mechanics	205.3

The decade of the eighties will mark the emergence of new occupations and the gradual demise of occupations that were in high demand since the birth of the industrial revolution.

The introduction and expansion of the use of robots in industry is one example of an area of emerging occupations. Jobs calling for robotic maintenance workers, robotic software specialists and manufacturing engineers with robotics applications will be in demand. The question to be answered is whether retraining for those workers displaced by robots will be possible, or will the skills and abilities of the displaced workers not measure up to the new skills required?

It is estimated that by 1990, the robot manufacturing industry will employ between 6,000 - 10,000 persons, chiefly in four areas: machine construction, computers, software, and engineering.

As this decade proceeds, the following occupations will experience declining demand and will eventually be replaced: telephone operators, stenographers, garage workers and attendants, sewers and stitchers, textile operatives, cleaners and servants, and farm laborers.

COLORADO OCCUPATIONAL EMPLOYMENT OUTLOOK

It is projected that Colorado industry will generate approximately 48,000 new jobs due to growth and 42,000 jobs due to replacement annually during the 1983-1988 period. (Growth is defined as job openings due to industrial expansion of existing establishments or births of new firms within or without existing industries. Replacement is defined as job openings due to deaths, retirements, temporary leave from the labor force and occupational changes.)

Approximately 29% of the 90,000 annual job opening generation will be related to professional, technical and managerial skills; 16% will be in the service occupations; 20% in the clerical and office occupations; 7% in sales and 27% in maintenance, repair, materials handling, and construction.

Of these 90,000 annual average job openings, approximately 55,300 will be represented by occupations related to vocational/technical training programs. Those occupational groups generating 1,000 or more jobs annually during this projected period are as follows:

Food Management Production & Services	5,350
Filing, Office Machines & General Office	4,063
General Merchandising	3,826
All Other Operatives & Semi-skilled Workers	3,571
Stenographic, Secretarial & Related Occupations	2,763
Accounting and Computing	2,373
Industrial Marketing	2,263
Materials Support Occupations	1,272
Heavy Equipment Operators	1,281
Carpentry	1,237
Other Construction & Maintenance	1,219
Nursing (Associate Degree)	1,208
Foremanship, Supervisor, & Management Dev.	1,179
Institutional & Home Management	1,143

The following list ranks those specific occupations expected to post the largest number of annual average job openings between 1983-1988:

	Employment	
OCCUPATIONAL TITLE	1983	1988
Sales Clerk	39,100	46,000
Waiters/Waitresses	35,100	41,300
General Clerk, Office	33,400	39,300
Secretary	33,300	39,300
Cashier	21,500	25,300
Teacher, Secondary	21,000	24,600
Teacher, Elementary	20,600	24,100
Sales Rep., Non Tech.	17,500	20,600
Bookkeeper, Hand	16,500	19,400
Nurse, Professional	16,500	19,200
Janitors	16,100	19,000
Stock Clerk	13,700	16,100
Store Manager	13,300	15,600
Typist	12,700	15,000
Carpenter	12,800	14,900

Between the 1970 and 1980 censuses white collar workers and service workers increased their proportional share of total employment as blue collar workers decreased. This phenomenon occurred nationally as well, emphasizing the fact that we are becoming more of a service-using economy than a goods-using economy.

A new phenomena in the job market during the 1980's will be the large numbers of college graduates as compared to the demand for college educated workers. There will be proportionately fewer job openings calling for advanced degreed workers and at the same time, more people in the labor force will have these degrees. Such a scenario results in an underutilized work force, and creates a competitive environment between those with job skills in demand but not the education, and those with the education but not the job skills. It also creates a highly competitive environment between equally qualified persons for the scarce jobs. Of the 15 occupations employing the most persons during this projection period, only four require degrees from academic institutions.

Projecting occupational job growth and replacement demand has become fairly viable with the use of the staffing patterns available from the Occupational Employment Statistics (OES) Program. However, to effectively determine over and under supply, it is essential to view the other part of the equation - available supply. The mobility of the current labor force, the availability and practice of transferring from one occupation to another, the acceptance of jobs totally unrelated to the training and/or education of persons results in unrealistic statistics concerning occupational supply. Despite this limitation, counselors, employers, career planners and employment training agencies require some insight into the relationship between supply and demand in the labor market.

One large source of information concerning supply is the Employment Service Automated Reporting System (ESARS). In FY 1978, more than 15 million people registered with Job Service Centers nationally seeking job-related services. Approximately 95% of these applicants were unemployed. In calendar year 1978, over 17 million persons were unemployed, implying that Job Service Centers register a substantial portion of labor supply.

Just as the demand projections do not encompass all demand, the available supply data from the ESARS program does not define the total supply. However, analysts in the Research and Development Section have designed a method of measurement using the available ESARS supply and job bank demand information for determining a workable analysis of the local labor market for short-term occupational supply and demand estimates. Output from the program (Quarterly Occupational Supply/Demand Outlook) indicates that, relative to the estimated demand expected, the following occupations will be in short supply during fiscal year 1984:

ESTIMATED OCCUPATIONS THAT WILL HAVE SIGNIFICANT OR HIGH UNDERSUPPLY RELATIVE TO ESTIMATED DEMAND
FY 1984
COLORADO

DOT CODE	OCCUPATIONAL TITLE

920687134	PACKER, AGRICULTURAL PRODUCE
929687010	CUTTER, BANANA ROOM
929687030	MATERIAL HANDLER

When using these occupations as guides for training programs or job search efforts, it should be recognized that occupational supply/demand imbalances are caused by many factors in addition to a shortage or redundancy of trained labor resources. The level and type of remuneration, job location, the hours to be worked, available transportation to and from the work site, and excessive turnover, are examples of factors in addition to the trained labor resource factor that can influence the degree of balance being achieved by the job match function for a particular occupation.

ADAMS COUNTY SERVICE DELIVERY AREA

Adams County Service Delivery Area

I. The Services Division

This division accounted for 24 percent of the employment in Adams County in 1982. The leading employment sectors and their percentage changes in employment are: Educational (-7.5), Health (-1.8), and Business Services (+5.0). Sectors which exhibited strong growth rates during this period were Hotels and Other Lodging (+74.7) and Membership Organizations (+36.7).

In general terms, employment in Services depends primarily on the level of aggregate demand in the economy. Given our expectation of higher levels of demand in 1984, most sectors of the Services division are expected to improve. Health and Business Services should experience low to moderate growth rates, while Educational Services will probably level off or decline.

II. The Retail Trade Division

Major sectors in this division in terms of numbers employed are Eating and Drinking Places, Food Stores, and Auto Dealers and Gas Stations. Rates of employment change in these sectors were +15.6, +24.9, and +3.3, respectively. Sectors which suffered significant percentage losses in employment were Apparel and Accessories, and Furniture and Home Furnishings.

Population growth, lower interest rates, and higher levels of consumer demand should lead to moderate employment growth in all sectors of the division in 1984.

III. The Manufacturing Division

Major employing sectors within this division are Electrical and Electonics, Food, Machinery Except Electrical,and Fabricated Metals Except Machinery. Between the first quarters of 1980 and 1982, employment in the division as a whole fell by 4.8 percent.

Manufacturing in Adams County was affected by the same variables which affected manufacturers nationwide: high interest rates, high prices, and increased competition from foreign sources.

Assuming lower interest rates, stable wage levels and increasing aggregate demand, employment should increase in most sectors of the manufacturing division in 1984. Employment growth should occur at moderate rates in Food; Apparel; Lumber and Wood; Furniture and Fixtures; Stone, Clay, Glass, and Concrete; Measuring and Analyzing Instruments; and Miscellaneous. Employment should remain stable or grow only slightly in Paper and Allied Products, Petroleum Refining, Machinery Except Electrical, and Electrical and Electronic.

IV. The Transportation and Public Utilities Division

The division as a whole experienced a 33.7 percent increase in employment between the first quarters of 1980 and 1982. Major sectors within this division in terms of numbers employed are Motor Freight Transportation and Warehousing; Communication; and Electric, Gas, and Sanitary Services.

With population growth and lower energy costs, employment is expected to grow moderately in most sectors of this division. Lower interest rates will also contribute to the health of these industries, since many of them are capital intensive.

V. The Wholesale Division

Employment in Durable Goods rose by 12.6 percent, while employment in Nondurable Goods fell by 4.3 percent between the first quarters of 1980 and 1982. Major employment sectors in Durable Goods are Motor Vehicles and Automotive Parts; and Machinery, Equipment, and Supplies. Major sectors of employment in Nondurable Goods are Groceries and Related Products; and Beer, Wine, and Distilled Alcoholic Beverages.

Employment in Wholesale Trade, as in retail, depends in large part on the level of aggregate demand. Given our expectations of rising demand in 1984, employment in the Wholesale division should experience moderate growth.

IV. The Construction Division

Employment in the division as a whole fell by 8.8 percent between the first quarters of 1980 and 1982. Changes in employment by sector were -1.3 in General Building Contracts, -14.9 in Construction Other than Building, and -8.4 in Special Trades Construction.

This trend is expected to reverse in 1984. Employment in Construction should improve slightly, especially in General Building and Special Trades Construction. The division as a whole should be helped by lower rates on mortgage loans, lower prices, and improved aggregate demand.

VII. The Finance, Insurance, and Real Estate Division

Major employing sectors within this division are Real Estate, Insurance, and Banking. The division as a whole experienced virtually no change in employment between the first quarters of 1980 and 1982.

In 1984, lower rates on mortgage loans should help raise employment levels slightly in the Real Estate sector. If these lower rates are accompanied by increases in aggregate demand and stable prices, employment levels in Banking and Insurance will also increase.

VIII. The Agriculture, Forestry and Fishery Division

Major employment sectors within the division are Ornamental Floriculture and Nursery Products, Crop Preparation Services for Market, and Lawn and Garden Services. With an increase in residential construction, employment levels in Nursery Products and Lawn and Garden Services would be expected to increase. Higher prices for agricultural products would tend to boost employment in Agricultural Services.

IX. The Mining Division

In Adams County, the major portion of employment within this division is in Oil and Gas Field Services. With continued stable prices for oil and gas in 1984, employment within the division is expected to remain steady or decline.

AREA Adams County

ARAPAHOE SERVICE DELIVERY AREA CONSORTIUM

(Comprising the Following Counties)

Arapahoe

Douglas

The Arapahoe-Douglas Service Delivery Area Consortium

I. The Services Division

Employment in the division as a whole rose by 15.7 percent between the first quarters of 1980 and 1982. Major sectors within the division, in terms of numbers employed, are Education, Business, and Miscellaneous Services. The Education sector registered an increase in employment of less than 1 percent, while Business Services registered a 48.2 percent increase and Miscellaneous Services showed a 19.6 percent increase. The only sector to register a decline in employment was Motion Pictures (-33.3 percent).

Employment growth should continue to be strong in this division in 1984, helped by increases in population and aggregate demand. Growth should be concentrated in Health, Auto Repair and Service, Business, and Miscellaneous Services.

II. The Retail Trade Division

Between the first quarters of 1980 and 1982, employment in this division increased by 10.2 percent. All individual sectors registered employment increases during this period, ranging from less than 1 percent in Auto Dealers and Gas Stations to a nearly 42 percent increase in Furniture and Home Furnishings.

Factors which tend to increase employment in Retail Trade are high levels of consumer spending and relatively low interest rates, among others. Population increases in the Consortium have also helped to raise employment levels in Retail. In 1984, we expect these variables to be at levels which are favorable for Retail Trade. Employment should increase moderately in all sectors of Retail Trade.

III. The Manufacturing Division

Major employment sectors, in terms of numbers employed, are Machinery Except Electrical, Electrical and Electronic, and Fabricated Metals Except Machinery. Percentage changes in employment in these sectors were -3.3, +11.2, and +4.8, respectively.

The division as a whole registered a 1.8 percent increase in employment. About half of the sectors within the division gained employment and about half lost. Among the strongest gainers in percentage terms were Printing and Publishing (+37.6) and Measuring and Analyzing Instruments (+11.4).

Low to moderate growth rates are expected in most manufacturing sectors in 1984. An increase in construction activity should help some sectors which were down in the 1980-1981 period, e.g., Lumber and Wood. Employment in Food Production should gain slightly, helped by population and spending increases.

IV. The Construction Division

The division as a whole posted a 5.4 percent increase in employment between the first quarters of 1980 and 1982. General Building Contractors gained 1 percent, Construction Other than Buildings declined by 15.7 percent, and Special Trades Construction gained 13.9 percent.

The fact that building construction continued at such an impressive rate in 1980 and 1982, in spite of high interest rates, demonstrates this area's attractiveness as a place to live and work. With lower interest rates and higher income and spending levels in 1984, employment prospects in Construction are expected to be very good. Employment growth in Building Construction and Special Trades Construction should continue at moderate to high rates, while employment growth in Construction Other than Buildings should be low to moderate.

V. The Finance, Insurance, and Real Estate Division

Employment in the division as a whole rose by 31.4 percent between the first quarters of 1980 and 1982. All sectors within the division scored impressive employment gains. Major sectors of employment and their percentage gains in employment were Real Estate (46.9), Credit Agencies Other than Banks (37.0), Insurance (11.7), and Banking (20.0).

Lower interest rates and increasing aggregate demand are expected to help maintain moderate to high rates of growth in this division in 1984.

VI. The Wholesale Trade Division

Employment in Durable Goods rose by 27.1 percent and employment in Nondurable Goods rose by 33.5 percent between the first quarters of 1980 and 1982. The division as a whole had a 28.4 percent employment growth rate.

Employment growth in Wholesale Trade is expected to remain at some moderate level in 1984, helped by increases in aggregate demand, stable prices and lower inventory finance rates. Growth should be especially strong in Lumber and Other Construction Materials, Electrical Goods, Hardware, and Groceries and Related Products.

VII. The Transportation and Public Utilities Division

Increases in population stimulated substantial employment growth in this division between the first quarters of 1980 and 1982. Employment in the division as a whole grew by 68.8 percent between the first quarters of 1980 and 1982.

Major sectors of employment, in terms of numbers employed, are Communication; Air Transportation; and Electric, Gas, and Sanitary Services. Employment growth rates in these sectors were 82.7 percent, 911 percent, and 8.4 percent, respectively.

In 1984, employment growth in the division is expected to occur at low to moderate rates. Many of the sectors are probably well staffed due to their tremendous growth in 1980 and 1981. Therefore, some of them are probably already reaching points of diminishing returns to additional labor. However, employment growth will probably continue to be strong in Motor Freight Transportation and Transportation Services.

VIII. The Mining Division

The division as a whole registered a 77.5 percent increase in employment between the first quarters of 1980 and 1982. Most of the jobs in this division occur in Oil and Gas Extraction and Metal Mining. Percentage change in employment in these sectors was 125.0 in Oil and Gas and -7.4 in Metal Mining.

Stable prices for oil and gas in 1984 will probably lead to flat or declining growth in employment. In Metal Mining, employment is expected to grow at a low to moderate rate.

IX. The Agriculture, Forestry and Fishery Division

Between the first quarter of 1980 and the first quarter of 1982, employment in Crop Production fell by 22.2 percent, while employment in Agricultural Services rose by 29.5 percent. Most of the increases in Agricultural services occurred in Landscape and Horticultural Services, which rose by 42.7 percent.

The same trends are expected to continue in 1984, with employment in Crop Production remaining flat or declining, and employment in Agricultural Services rising at some moderate rate.

Balance of State

I. The Services Division

The division as a whole experienced a 11.4 percent growth in employment between the first quarters of 1980 and 1982. Every sector registered employment gains during this period. Among the major employment sectors, i.e., the sectors which employ the most people, Health Services registered a 12.1 percent gain, Education added 2.5 percent, and Hotels and Other Lodging experienced a 15.2 percent employment growth.

Employment in Services is generally dependent on levels of aggregate demand, prices, and population growth. Although aggregate demand was slack during 1980 and 1981, population increase helped boost the demand for services. This trend is expected to continue in 1984, with most sectors in the Services division experiencing moderate employment increases.

II. The Retail Trade Division

The division as a whole experienced an 8.6 percent employment growth rate between the first quarters of 1980 and 1982. Among the major sectors, employment grew by 9.7 percent in Eating and Drinking Places, 15.4 percent in Food Stores, and 13 percent in Miscellaneous Retailers (includes Drug and Liquor Stores). Auto Dealers and Gas Stations experienced a 3.1 percent decline in employment.

Retail Trade is highly dependent on levels of aggregate demand, interest rates on consumer loans and population growth. In 1984, all of these variables are expected to be favorable levels for Retail Trade. Growth in population and increases in consumer demand should boost employment in Food Stores, Apparel, Eating and Drinking Places, General Merchandise, and Miscellaneous retailers. Lower interest rates should lead to low to moderate growth in Building Materials and Hardware, Auto Dealers, and Furniture and Home Furnishings.

III. The Construction Division

Employment in the General Building Contracts sector remained virtually unchanged; employment in Construction Other than Buildings fell by 18.4 percent, and Special Trades employment grew by 22.7 percent. Under General Building Contracts, employment grew in Residential Building (8.7 percent) and declined in Non-residential Building (-4.3 percent).

Lower mortgage rates and higher levels of aggregate demand are expected to boost employment levels in Construction in 1984. Growth should be moderate in Residential Building, while modest growth rates are expected to characterize Non-residential Building, Non-Building Construction, and Special Trades Construction.

IV. The Transportation and Public Utilities Division

Most industry sectors within the division experienced significant employment gains between the first quarters of 1980 and 1982. Among the major sectors, Electric, Gas, and Sanitary Services employment increased by 21.9 percent, Motor Freight Transportation and Warehousing experienced a 25.1 percent gain, and employment in Communications rose by 1.3 percent.

Lower energy costs, lower interest rates, and improved opportunities for construction and capital investment should allow employment in this division to grow at a moderate rate in 1984. Growth rates should be especially strong in Motor Freight Transportation and Electric, Gas, and Sanitary Services.

V. The Manufacturing Division

The division as a whole experienced a 2 percent increase in employment between the first quarter of 1980 and the first quarter of 1982. Major sectors within the division in terms of numbers employed are Food; Printing and Publishing; Stone, Clay, Glass and Concrete; and Lumber and Wood Except Furniture.

The health of the Manufacturing division is generally dependent on levels of interest rates (on both consumer loans and business investment loans), aggregate demand, and price levels. In this Service Delivery Area, most of the major employing sectors are dependent on aggregate demand and population growth, which in turn affect construction activity. Given our expectations of rising population and aggregate demand and falling interest rates, employment levels in manufacturing are expected to grow slowly in 1984.

VI. The Finance, Insurance, and Real Estate Division

All major sectors within the division experienced employment growth between the first quarters of 1980 and 1982. Major employment sectors, and their percentage changes in employment, were Real Estate (+18.3), Banking (+13.1), and Credit Agencies Other Than Banks (+9.0). Insurance registered a 33.3 percent employment growth.

Employment levels in this division generally depend upon levels of interest rates and aggregate demand. Spending on new homes, businesses, and durable goods will create demand for financial and brokerage services. In 1984, these higher levels of aggregate demand are expected to materialize. Employment opportunities in this division should be good, with all of the major sectors experiencing growth.

VII. The Mining Division

Between the first quarters of 1980 and 1982, employment in the division as a whole increased by 4.4 percent. A fairly wide variety of mining takes place in this Service Delivery Area, including bituminous coal and lignite, oil and gas extraction, and many forms of metal mining.

It is difficult to predict what employment levels in mining will be in 1984. As prices for oil drop, more electric utilities are reconsidering their planned conversion to coal burning plants, due to the high cost of conversion. We can expect employment in coal mining to remain flat in 1984. Employment levels in oil and gas extraction will probably remain flat or increase slightly, depending on to what extent demand for these products increases in response to lower prices. Finally, employment in Metal Mining can be expected to increase slightly, due to an expected increase in the demand for uranium.

VIII. The Wholesale Trade Division

Both major sectors of this division registered healthy employment increases, with Durable Goods posting a 15.7 percent increase and Non-Durable Goods showing a 5.2 percent gain.

The health of this division depends on many factors, including interest rates on business and consumer loans, levels of aggregate demand, and rates of inflation. In 1984, we expect the economic environment to be favorable for wholesale trade, with lower interest rates and higher levels of aggregate demand contributing to employment growth. This growth is expected to occur at low to moderate levels in 1984.

IX. The Agriculture, Forestry and Fishery Division

Employment in the division as a whole rose by 3.4 percent between the first quarters of 1980 and 1982. In 1984, employment is expected to remain flat or rise slightly in all major sectors of Agriculture, i.e., Crop Production, Livestock Production, and Agricultural Services. Employment in Forestry and Fishery is expected to remain flat or decline.

COLORADO DIVISION OF EMPLOYMENT AND TRAINING
RESEARCH AND DEVELOPMENT SECTION

NOTE: TOTAL NEW HIRES IS THE SUM OF REPLACEMENT DEMAND (INCLUDING TURNOVER), AND GROWTH.

BOULDER COUNTY SERVICE DELIVERY AREA

Boulder County Service Delivery Area

I. The Services Division

This division is the most important sector in Boulder County in terms of number of jobs provided. It accounted for approximately one-third of the total employment in Boulder County in the first quarter of 1982. Between the first quarters of 1980 and 1982, employment in Services grew by 4 percent.

As one might expect, the most important service sector in Boulder County is Education. The Education sector registered a 7 percent decline in employment between the first quarters of 1980 and 1982. Health services follow Education in terms of numbers employed. Employment in this sector increased by 8.6 percent between the first quarters of 1980 and 1982. This was led by a 9 percent increase in Hospital employment and an 8 percent increase in employment in Physician's Offices. Employment in Business Services increased markedly, showing a 23 percent gain.

The following sectors are expected to show slight to moderate employment gains in 1984: Hotels and Other Lodging, Personal Services, Business Services, Auto Repair and Service, Miscellaneous Repair, Amusement and Recreation, Health, Legal, and Miscellaneous Services. Employment is expected to remain flat or decline in the following sectors: Educational, Social, and Membership Organizations.

II. The Manufacturing Division

Boulder County boasts several major manufacturing employers, including IBM, Storage Technology, Ball Manufacturing, and Beech Aircraft. Boulder County is attractive to employers partly due to its combination of semi-rural atmosphere with favorable access to the diverse labor market in the Denver metropolitan area.

Within the Manufacturing division, the major sectors in terms of employment levels are Machinery Except Electrical; Measuring, Analyzing and Controlling Instruments; and Electrical and Electronic Machinery. Sectors which posted major percentage gains in employment are Printing and Publishing (19.2 percent) and Fabricated Metals Except Machinery (13 percent). Large percentage losses in employment occurred in Transportation Equipment (-15.3 percent) and Primary Metals (-13.3 percent). Although several firms suffered layoffs in 1982 and early 1983, employment in the division as a whole remained relatively steady.

Employment in the Manufacturing division as a whole is expected to increase steadily during 1984 and 1985. Several factors are responsible for this optimism. Lower interest rates should spur capital investment in the area. Wage levels are expected to remain steady, thereby making the area even more attractive to potential employers. A nationwide and local increase in aggregate demand should help to improve profit margins. Several firms in Boulder County are defense contractors, and spending for national defense is expected to increase in 1984 and 1985. Finally, Boulder County's major manufacturing employers are high technology-based, and are able to compete more effectively on an international level than basic manufacturing firms.

III. The Retail Trade Division

The division as a whole registered a 1 percent loss in employment between the first quarters of 1980 and 1982. A large portion of this loss came in three sectors: General Merchandise (-15 percent), Auto Dealers and Gas Stations (-16 percent), and Furniture and Home Furnishings (-12.7 percent).

The sector with the largest numbers employed is Eating and Drinking Places. This sector faces a relatively steady demand partly due to the steady stream of student dollars that flow into it. Boulder is also a convenient rest stop for campers, tourists, and skiers on their way home from mountain recreational areas such as Brainard Lake and Lake Eldora. A 4 percent increase in employment was registered between 1980 and 1982.

In 1984 and 1985, employment is expected to increase moderately in the traditionally strong sectors such as Food Stores and Miscellaneous Retailers. Lower interest rates and improved aggregate demand should lead to increased employment in the sectors which have been down in the last few years, i.e., Auto Dealers and Gas Stations, Furniture and Home Furnishings, and General Merchandise.

IV. The Construction Division

Employment in the Construction division as a whole fell by 5.3 percent between the first quarters of 1980 and 1982. The General Building Contract Sector fell off by 20.6 percent, Construction Other than Building maintained a stable level of employment, while Special Trades Construction showed a slight 1.2 percent increase.

Within the General Building Contract sector, employment in residential construction fell by 14.8 percent, while employment in nonresidential construction registered a small 2 percent increase. Operative Builders suffered a 50 percent decrease in employment.

Signals early in 1983 indicate that residential building in Boulder County is picking up. The City of Boulder issued 96 building permits in February of 1983, compared with no permits issued in the previous February. Louisville issued 72 permits in February of 1983 compared with only 5 permits in the same month of 1982.

Residential construction should continue to grow in 1984, although most of it is expected to occur outside of the City of Boulder. Given lower interest rates and a general economic recovery, existing high technology firms in the County may expand, thereby providing jobs in nonresidential construction. Finally, Special Trades Construction is expected to show a small growth in employment if the economic recovery leads to more demand for home improvements.

V. The Transportation and Public Utilities Division

The division as a whole posted a 6.5 percent increase in employment between the first quarters of 1980 and 1982. Among the major sectors in the division, Communications employment increased by 12.7 percent, employment in Motor Freight Transportation and Warehousing increased by 4.8 percent, and Postal Service employment increased by 2.3 percent.

Employment is expected to increase in the following sectors in 1984 and 1985, reflecting a general increase in the population of Boulder County: Local and Suburban Passenger Transportation; Motor Freight Transportation; U.S. Postal Service; Air Transportation; Transportation Services; Communications; and Electric, Gas, and Sanitary Services.

VI. The Finance, Insurance, and Real Estate Division

On the whole, this division showed a 2.5 percent decrease in employment between the first quarters of 1980 and 1982. Major sectors within the division are Banking (no change in employment), Real Estate (-8.8 percent), and Credit Agencies Other than Banks (-7.1 percent). The sector which registered the highest growth rate in employment was Security and Commodity Brokers, Dealers, Exchanges, and Services (+65.5 percent). The sector with the largest employment loss in percentage terms was Insurance (-33.6 per--cent).

With falling interest rates, increased capital investment and an increase in aggregate demand, employment in this division can be expected to grow significantly in 1984 and 1985. Growth rates should be highest in the Security and Commodity Broker sector and Real Estate, while growth should be moderate in Banking, Insurance, and Credit Agencies Other than Banks.

VII. The Wholesale Trade Division

The division as a whole posted a 16.8 percent increase in jobs between the first quarters of 1980 and 1982. Employment growth was strong in the Durable Goods sector (+38.7 percent), while employment in Nondurable Goods fell by 6 percent.

The division should exhibit good growth rates in 1984. Demand from construction and high-tech industries should keep the Durable Goods sector buoyant, while a general increase in consumer demand should help both sectors.

VIII. The Agriculture Division

Employment in the division as a whole grew by 2.4 percent between the first quarters of 1980 and 1982. Most of the employment in the division is in Agricultural Services, such as veterinary services and landscaping. Employment in Crop Production fell by 24 percent in this period.

The division should grow slightly in 1984, with most of the growth coming in Agricultural Services.

IX. The Mining Division

Mining provides only a very small percentage of total employment in Boulder County. This division grew by 28.6 percent between the first quarters of 1980 and 1982. Most of the employment growth occurred in Metal Mining, especially Silver; and Oil and Gas Extraction.

This division is expected to remain flat or decline in 1984, as prices for silver and oil and gas remain steady or decline.

DENVER COUNTY SERVICE DELIVERY AREA

Denver County Service Delivery Area

The year 1982 will probably be remembered as one of the most historically important in the history of the American economy. The national unemployment rate rose more than two percentage points from December of 1981 to December of 1982. This indicates that approximately 2,600,000 people lost their jobs during that year.

In Colorado, the recession was less severe, but did not bypass the State as some national recessions virtually have. The recent layoffs in energy related industries in Colorado indicate that the State is becoming increasingly dependent for its economic health on national and international economic trends.

The volatility of employment levels and other economic indicators in the past two years makes prediction of future employment levels difficult. The first few months of 1983 send mixed signals. The unemployment rate for Denver County fell from 8.1 percent in February to 7.4 percent in March. At the national level, the Dow Jones Industrial Average is rising dramatically, but consumers are not showing the same enthusiasm in purchasing durable goods. Given these mixed signals, the prediction of future levels of employment necessitates making certain assumptions about the behavior of economic variables which we have identified to be primarily important. We assume the following conditions will characterize the economy in Denver County in 1984 and 1985.

1) National monetary policy will be relatively loose, allowing interest rates on consumer loans to fall slightly and remain at about 11 percent.

2) The rate of inflation will hover at some low to moderate level.

3) Import competition will continue to be significant, especially affecting the Manufacturing Division.

4) Wage increases will keep pace with productivity gains.

5) Aggregate demand will rise slowly and moderately.

These assumptions provide the basis for the following major industry division forecasts for Denver County. Divisions are analyzed in order of their importance to the Denver economy, i.e., in terms of number of jobs provided.

The Service Industry

The Service industry is the most important sector of the Denver County economy in terms of number of jobs provided. This Division accounted for 30 percent of the jobs in the area. Total employment in this area increased by 9.0 percent between the first quarters of 1980 and 1982.

The types of services included in this Division vary widely. To name some of the most familiar and important, educational, business, health, and automotive repair services are included. Also included are motion pictures and other amusement and recreational services.

Generally speaking, the Services Division is relatively immune to the first three economic factors mentioned above. Most services are labor intensive, i.e., the production of the service requires a high proportion of labor to capital. Therefore, the health of the industry is not as dependent on movements in interest rates as, say, manufacturing is. Also, most services exhibit a relatively low elasticity of demand, i.e., an increase in price brings about a less than proportional decrease in demand. Thus, they are less sensitive to price changes than most products. Finally, services face little competition from imports, for obvious reasons.

Among the different types of services in the Services Division, health accounted for more employment than any other single service. Employment in health services increased by 15 percent between the first quarter of 1980 and the first quarter of 1982. The health service industry has been characterized by rapid technological change in the past ten years. Costs have increased accordingly, but only recently have these costs been accompanied by falling demand. But given the nature of this demand, i.e., a highly inelastic one, employment can be expected to grow with a growing population. In Denver County in 1984 and 1985, the rate of growth in employment in health services can be expected to fall very slightly.

Business services as a whole experienced a 13.4 percent growth in employment between the first quarters of 1980 and 1982. In 1984 and 1985, this growth rate can be expected to moderate substantially. A surplus of office space in the Denver area should lead to a marked change from the building boom in the downtown area. This, in turn, will lessen growth in cleaning and maintenance services, which were experiencing rapid increases in employment between 1980 and 1982. Growth in demand for advertising services should grow very slightly in 1984 and 1985, helped by increases in consumer demand. Employment in computer programming, software, and data processing services should continue to grow at a relatively fast pace.

Employment in educational services as a whole rose by 2.8 percent between the first quarters of 1980 and 1982. However, this aggregate increase is misleading. Most of the increase occurred in business and secretarial schools, where employment rose by 14.8 percent. Most other types of educational services actually experienced declines in employment. In 1984 and 1985, employment should increase slightly in technical and vocational schools, reflecting an increasing public concern with obtaining specialized training to allow them to compete in a tight labor market. Employment in colleges and universities should continue to decline, reflecting higher tuition costs and a surplus of college degrees.

The Retail Trade Division

The Retail Trade Division ranked second in terms of number of jobs provided in Denver County. However, the Division experienced a 3.1 percent decline in employment between the first quarters of 1980 and 1982.

Retail Trade is generally quite dependent on all five of the economic variables which we have identified above as becoming primarily important in the next several years. Interest rate levels affect both sides of the supply-demand equation. High interest rates affect a retailer's cost of financing inventory in the short term, and may therefore lead to increased prices. High interest rates also affect decisions of consumers who intend to buy goods on credit. Sales of automobiles and durable goods are highly dependent on interest rates.

Abnormally high rates of inflation affect retail sales in different ways, depending on whether or not the potential consumer expects the high levels to continue. If the high levels of price increase are expected to continue, consumers will probably buy now before their money loses more real value. If the rate of price increase is expected to level off and possibly even fall, the consumers may perceive that their dollar will gain buying power if they put off the purchase for a short time.

Lower-priced imported goods may actually lead to improved employment in some sectors of the Retail Trade Division, by providing retailers with access to lower priced goods to offer their customers. If employment is affected, it would probably take the form of a shift from stores which sell a larger proportion of American-made goods to stores which sell more foreign-made goods. The major adverse affects of import competition take place in the Manufacturing Division.

Wage levels are traditionally low in retail trade, with many of the workers beginning at minimum wage. One exception to this is food store clerks in the chains, who are often unionized and therefore more highly paid.

Within the Retail Division, two sectors posted gains in employment between the first quarters of 1980 and 1982. These sectors were Miscellaneous Retailers (drug stores, liquor stores etc.) and Automotive Dealers and Gas and Service Stations. However, dealers of both new and used cars and parts actually lost employment in the two year period. Thus, most of the gain in that sector was accounted for by Recreational and Utility Trailer Dealers, Motorcycle Dealers and Gasoline Service Stations.

Retailing should improve with the generally better economic climate that we expect in 1984 and 1985. Auto dealers should be helped by cost cutting measures now taking place in the industry, and by slightly lower interest rates. Eating and Drinking Places will be helped by a general loosening of consumer pursestrings. Food Stores, General Merchandise, and Apparel will employ more people as the population increases steadily. Finally, the Building Materials and Hardware Sector and the Furniture and Home Furnishings Sector should improve slightly, helped by more consumer spending.

The Transportation and Public Utilities Division

The Communications Sector and Air Transportation Sector account for the major portion of employment in this division. Both of these sectors posted gains in employment between the first quarter of 1980 and the first quarter of 1982. In early 1983, Continental and Frontier Airlines announced some layoffs. However, employment in Air Transportation should improve slightly in 1984 and 1985, helped by improved demand from business users and consumers. Employment in the Communications Sector will rise as new television cable services are installed in the Denver area.

Employment in the Electric, Gas, and Sanitary Service Sector should remain steady or improve slightly as these utilities attempt to control costs.

Motor Freight Transportation, which experienced a negative growth rate in the two year period between the first quarters of 1980 and 1982, should show a very small growth in 1984 and 1985, as aggregate demand improves and the market structure stabilizes after several years of volatile competition. Further decreases in fuel prices would also be expected to lead to improvement in this sector.

Improvement in the Local and Suburban Passenger Transportation Sector will depend largely on whether local providers of these services respond to lower energy costs by lowering prices. A general improvement in economic activity would tend to increase ridership; however, many new riders may find that costs are prohibitive for daily use.

The Manufacturing Division

Manufacturing is the Division that has been hardest hit by the recession in Denver County, as has been the case nationwide. As a whole, employment in the Manufacturing Division in Denver County fell by 15.7 percent between the first quarters of 1980 and 1982. The Division was hurt by high interest rates, high rates of inflation, competition from imported products, and a slackened aggregate demand.

The following sectors are expected to post low to moderate growth rates in employment in 1984 and 1985: Food and Kindred Products; Textiles; Apparel; Lumber and Wood; Furniture and Fixtures; Paper and Allied Products; Printing and Publishing; Chemicals; Rubber and Plastics; Stone, Clay, Glass, and Concrete Products; Fabricated Metals Except Machinery; Electrical and Electronic Transportation Equipment; Measuring and Controlling Instruments (includes camera equipment and watches and clocks) and Miscellaneous (includes toys and sporting goods).

Sectors which are expected to remain flat or decline are: Petroleum Refining, Leather Products, Primary Metals, and Machinery Except Electrical.

The Finance, Insurance, and Real Estate Sector

This sector posted a formidable 11.8 percent growth rate in employment between the first quarter of 1980 and the first quarter of 1982. It was led by a 63.6 percent increase in employment in Security and Commodity Brokerage Companies. Employment in holding companies and other investment offices increased by 56.1 percent, while employment in banking showed a 17 percent rate of growth.

Soft energy and agricultural prices will lead to a negative rate of growth in employment in Commodity Brokerage. Employment in the Holding and Other Investment Offices Sector will level off and possibly even decline. Demand for Banking, Insurance, and Real Estate services will rise slightly, reflecting the general improvement in economic activity in Denver County and slightly lower interest rates.

Wholesale Trade Division

This Division registered a small 2.1 percent change in employment between the first quarters of 1980 and 1982. However, this improvement was accounted for completely by the Nondurable Goods Sector, which registered an 8.1 percent increase in employment, while Durable Goods employment showed a 1 percent decline.

Both sectors are expected to have minor increases in employment in 1984 and 1985. In the Durable Goods Sector, the improvement is expected to be concentrated in the Furniture, Lumber, Hardware, and Electrical Goods. Commercial Machinery (including computers and cooking equipment) will experience slight growth, while employment in Construction and Mining Machinery, Farm Machinery, and Industrial Machinery will remain flat or decline.

In the Durable Goods Sector, small improvements will be posted in Apparel; Groceries; and Beer, Wine, and Distilled Alcoholic Beverage products sectors.

The Construction Division

Construction employment registered a 4.4 percent increase in Denver County between the first quarters of 1980 and 1982. There was a 12.6 percent increase in the General Building Construction Contractors Sector and a 4.9 percent increase in Special Trade Contract employment. Construction Other than Building Construction showed a 4.2 percent decline in employment.

Lower interest rates, moderate to low levels of inflation, and a general increase in aggregate demand are expected to improve prospects for construction employment in 1984 and 1985. However, the growth rate of employment in the General Building Construction Sector will fall somewhat, reflecting an adjustment of available resources as the available excess supply of office space is used up. The plans to improve or rebuild several viaducts in the Denver area will improve employment in the Construction Other than Building Construction Sector. Moderate improvements are expected in Residential Building, and increases in aggregate demand should spur spending for home improvements and thereby increase employment in Special Trade Construction.

The Mining Division

Employment in the Mining Division increased by 94 percent between the first quarter of 1980 and the first quarter of 1982. This increase was largely accounted for by large increases (128 and 94 percent, respectively) in the Metal Mining and Oil and Gas Extraction Sectors.

It should be remembered that most of these increases are in white-collar occupations, and result mostly as a result of Denver's new status as the hub of the National Energy Industry.

The mining industry derives its demand partly from the national and international demand for automobiles. As auto sales have flattened in the past one and one-half years, employment has flattened in the Mining Division. Institutional changes have also contributed to the leveling of employment, especially conservation efforts and increasing environmental concerns. The steel industry has been profoundly affected by lower priced steel imports, which lessen demand for American-made steel and thereby lessen demand for metallic inputs. Finally, recent OPEC price reductionshave and will continue to affect the level of oil and gas extraction in the state.

After resource levels adjust to recent price changes, and given increasing aggregate demand, lower interest rates, and stable wage levels in the steel and auto industries, employment should improve slightly in the Mining Division in 1984 and 1985. The increase in employment, however, will probably not be as large as the concurrent sales growth in the Division, as managers will be careful not to allow their costs to get out of line.

EL PASO COUNTY SERVICE DELIVERY AREA

El Paso County Service Delivery Area

I. The Services Division

Major employment sectors within the division, in terms of numbers employed, are Educational, Health, and Business. Employment growth rates for these sectors between the first quarters of 1980 and 1982 were +2.7, +10.7, and +2.5, respectively. Most Service sectors registered employment growth during this time period, ranging from small to very large rates of growth. The only sector to lose employment during this period was Motion Pictures.

Prospects for employment growth in Services in 1984 are very good. Increases in population and aggregate demand in El Paso County will raise employment levels in Business Services. Employment levels are expected to grow slowly to moderately in all Service sectors in 1984.

II. The Retail Trade Division

In terms of numbers employed, major sectors within the division are Eating and Drinking Places, General Merchandise, and Miscellaneous Retailers (includes Drug and Liquor Stores). Percentage changes in employment in these sectors were +13.9, +6.5, and +11.5, respectively. Two retail sectors registered employment losses: Auto Dealers and Gas Stations (-4.1 percent) and Furniture and Home Furnishings (-6.5 percent).

Employment levels should continue to grow in the major sectors in 1984, helped by a general increase in aggregate demand. The sectors which lost employment between the first quarters of 1980 and 1982 are expected to turn around. Lower interest rates should help sales and employment levels in Auto Dealers and Gas Stations, Furniture and Home Furnishings, and Building Materials and Hardware.

III. The Manufacturing Division

Between the first quarters of 1980 and 1982, Manufacturing employment in El Paso County grew by an astounding 31 percent. Major employment sectors and their percentage changes in employment during this period, are Electrical and Electronic (+88.1), Machinery Except Electrical (+64.4) and Printing and Publishing (+4.4). Another major employment sector is Measuring and Analyzing Instruments.

About half of the two-digit sectors in the Manufacturing division lost employment between 1980 and 1982. Among the more notable were Furniture and Fixtures (-7.9 percent) and Fabricated Metals Except Machinery (-1.1 percent). Both of these sectors were hurt by the nation-wide decline in construction activity.

The majority of sectors should register employment gains in 1984, given our expectation of lower interest rates, higher levels of aggregate demand, and stable wage and price levels. El Paso County has proven itself quite capable of attracting firms from the burgeoning "high-tech" industries. Therefore, growth should be especially pronounced in the Electrical and Electronic and Measuring and Analyzing Instrument sectors. Other sectors which should show strong growth are Machinery Except Electrical, and Printing and Publishing.

IV. The Transportation and Public Utilities Division

This division posted a strong 17.8 percent gain in total employment between the first quarters of 1980 and 1982. The only sector to show a decline in employment was Transportation Services (-9.7 percent).

Population growth and general increases in aggregate demand are factors which would tend to increase employment in Transportation and Public Utilities. Growth of the business sector and lower energy costs would have a particularly positive affect on Air Transportation and Motor Freight Transportation. All of these economic factors are expected to characterize El Paso County in 1984, and therefore all sectors of this division are expected to exhibit moderate employment growth in that year.

V. The Construction Division

Between the first quarters of 1980 and 1982, percentage changes in employment by sector were +13.4 for General Building Contracts, -36.9 for Construction Other than Buildings, and +6.1 for Special Trade Contracts.

Between February 1982 and February 1983, the value of non-residential construction contracts in Colorado Springs increased by 31 percent, while the value of residential contracts increased by 105 percent. These increases resulted partly from the slow but steady decline of mortgage interest rates, and by a general expectation of economic recovery.

The upward trend in construciton activity is expected to continue into 1984 and beyond, helped by declining rates on mortgage loans and low to moderate levels of inflation. Ground-breaking for the new Consolidated Space Operations took place in May of 1983. The $1 billion project is expected to employ increasingly large numbers of construction workers through 1986. Moderate employment growth rates should characterize all sectors of the Construction division.

VI. The Finance, Insurance, and Real Estate Division

Between the first quarters of 1980 and 1982, employment declines occurred in Real Estate (-6.9 percent), and Insurance (-14.8 percent). Banking posted a 1.6 percent employment gain. Credit Agencies Other than Banks and Security and Commodity Brokers showed employment growth rates of 4.1 percent and 30.8 percent, respectively.

Given our expectation of lower rates on mortgage loans, low rates of inflation, and increased aggregate demand, all sectors of this division should fare well in 1984.

VII. The Wholesale Trade Division

Employment in the Durable Goods sector fell by -4.4 percent, while employment in Non-Durable Goods rose by 14.3 percent.

Like the Retail Trade division, general increases in aggregate demand, lower interest rates, and low levels of inflation should lead to increased wholesale activity, and therefore increased employment in the majority of sectors.

COLORADO DIVISION OF EMPLOYMENT AND TRAINING
RESEARCH AND DEVELOPMENT SECTION

NOTE: TOTAL NEW HIRES IS THE SUM OF REPLACEMENT DEMAND (INCLUDING TURNOVER), AND GROWTH.

JEFFERSON SERVICE DELIVERY AREA CONSORTIUM

(Comprising the Following Counties)

Clear Creek

Gilpin

Jefferson

The Jefferson Service Delivery Area Consortium

I. The Services Division

Services account for approximately 26 percent of total employment in the Jefferson Consortium. Between the first quarters of 1980 and 1982, employment in the division as a whole grew by 9.8 percent.

Major sectors in the division in terms of numbers employed are Educational, Health and Business Service sectors. Employment growth rates in Health and Business Service were 8.7 percent and 24.3 percent, respectively. Sectors which lost employment are Hotels and Other Lodging (-3.4 percent) and Auto Repair and Service (-4.9 percent).

Services are generally dependent on levels of population growth and aggregate demand. Given our expectation that both of these factors will increase in Jefferson in 1984, employment in Services is expected to be quite good. However, employment growth will be slow in Educational and Social services.

II. The Manufacturing Division

Major sectors within this division in terms of numbers employed are Transportation Equipment, Food, and Chemical and Allied Products.

Manufacturing employment generally depends on wage and price levels, import competition, and interest rates. All of these factors have affected manufacturing employment in the Jefferson Consortium to a greater or lesser degree in the last three years. In 1984, it is expected that all of these variables will be at levels which will favor increases in employment in this division. Increases should be low to moderate in most sectors.

III. The Retail Trade Division

Between the first quarters of 1980 and 1982, employment levels were relatively steady. Several sectors experienced slight losses; Building Materials and Hardware (-2.9 percent), General Merchandise (-4.2 percent), Auto Dealers and Gas Stations (-6.2 percent), and Apparel and Accessory Stores (-4.0 percent). Sectors with large gains were Food Stores (+9.0 percent) and Furniture and Home Furnishings (+24.8 percent).

In 1984, increases in aggregate demand and home building and lower rates on consumer loans should help turn around sectors which were declining in 1980 and 1981. Population and income increases will raise employment levels in Food Stores, Eating and Drinking Places, and Miscellaneous Retailers.

IV. The Construction Division

Employment in General Building Contract Construction rose by 12.8 percent, although all of this increase was accounted for by Residential Building (+104 percent). Non-residential Building fell by 23.4 percent. Construction Other than Building employment fell by 3.2 percent, while Special Trades Contractors experienced a 3.1 percent decline.

At the beginning of 1983, activity in Jefferson County construction was quite brisk, with residential construction permits up 580 percent from the same time in the previous year. Various factors contributed to this upsurge, among them falling interest rates and stable prices. This trend is expected to continue into 1984. Employment growth is expected to be moderate in Residential Construction and Special Trades Contractors, while growth should be low to moderate in Construction Other than Building.

V. The Finance, Insurance, and Real Estate Division

Employment in the division as a whole grew by 2.9 percent between the first quarters of 1980 and 1982. Percentage changes in employment in the major sectors of employment were -17.0 in Real Estate, +7.2 in Banking, and +8.8 in Credit Agencies Other than Banks. Employment in Insurance rose by 2.8 percent.

Lower interest rates and increasing aggregate demand in 1984 should lead to slight to moderate employment gains in this division. Increased demand for consumer loans would help employment in Banks and Other Credit Agencies. Increases in construction and auto sales would help the Insurance sector.

VI. The Mining Division

Employment in the division as a whole increased by approximately 1 percent between the first quarters of 1980 and 1982. Most of the Mining employment occurs in Metal Mining and Oil and Gas Extraction. The latter experienced a 157 percent employment growth during this period.

In 1984, employment in Mining is expected to remain flat or decline in Oil and Gas Extraction, due to steady prices for those products. Employment in Metal Mining will probably remain steady, but a slight increase is possible depending upon the level of demand for steel.

VII. The Transportation and Public Utilities Division

Employment in the division as a whole increased by 20.6 percent between the first quarters of 1980 and 1982. Major employment sectors within the division are Communications; Electric, Gas, and Sanitary Services; and Motor Freight Transportation and Warehousing. Percentage changes in employment were -1.0 in Electric, Gas and Sanitary Services and +40.7 in Motor Freight Transportation and Warehousing.

Factors which account for employment changes in this division are population growth, interest rates on investments, and energy costs. In 1984, population is expected to be increasing relatively rapidly in the Jefferson Consortium, while interest rates and energy costs are expected to be relatively low. Assuming that these expectations hold true, employment prospects will be good in this division. Growth rates should be low to moderate in Electric, Gas, and Sanitary Services; Communications; and Local and Suburban Passenger Transportation. Growth rates should be moderate to high in Motor Freight Transportation and Warehousing.

VIII. The Wholesale Trade Division

Between the first quarters of 1980 and 1982, employment in Wholesale Trade increased by a healthy 29.4 percent. Durable Goods experienced a 36.8 percent growth, while employment in Non-durable Goods increased by 8.7 percent.

Lower interest rates, stable prices, and higher levels of aggregate demand should allow the Wholesale division to continue to add positions in 1984. Employment growth should be low to moderate in the majority of sectors.

IX. The Agriculture, Forestry and Fishery Division

Between the first quarters of 1980 and 1982, employment in the division as a whole fell by 7.6 percent. Crop Production experienced a -10 percent change in employment, while Livestock Production fell by 58.7 percent. Employment in Agricultural Services rose slightly (1.5 percent).

In 1984, employment is expected to remain steady or increase slightly in this division. At this point in 1983, prices in Agriculture have risen somewhat, but it remains to be seen what effect these increases will have on employment levels.

NOTE: TOTAL NEW HIRES IS THE SUM OF REPLACEMENT DEMAND (INCLUDING TURNOVER), AND GROWTH.

LARIMER COUNTY SERVICE DELIVERY AREA

Larimer County Service Delivery Area

I. The Services Division

Within the division, the three major sectors in terms of numbers employed are Education, Health, and Business Services. Between the first quarters of 1980 and 1982, rates of change in employment in these sectors were +3.2, +18.7, and +28.6, respectively. Sectors suffering biggest losses in percentage terms were Miscellaneous Repair (-27.3), Hotels and Other Lodging (-20.8), and Auto Repair and Service (-19.3).

Larimer is expected to be characterized by relatively rapid population growth and increasing economic activity. Employment in the Education sector should level off, especially in Colleges, Universities, and Professional Schools. However, employment growth should be moderate for most other services, provided that inflation levels remain low.

II. The Manufacturing Division

Major employment sectors within the division are Machinery Except Electrical; Measuring, Analyzing, and Controlling Instruments; and Electrical and Electronic Machinery. Declines in Lumber and Wood Products (-27.1) and Furniture and Fixtures (-23.6) reflected the decline in the construction industry between 1980 and 1982.

Larimer County has become an increasingly attractive area for potential employers to locate in the past decade, primarily because of it's aesthetically appealing environment and its proximity to the diverse labor force along the Front Range. One can expect this appeal to continue, although there is no way to tell at this point how it will translate into new jobs in manufacturing.

Declining interest rates, steadily low rates of price increase, and stable wage levels should lead to increasing growth rates in manufacturing during 1984. Many of the manufacturers in the area are relatively new, and exhibit the ability to compete on an international level.

Employment levels are expected to rise moderately in the following sectors: Food and Kindred; Lumber and Wood; Furniture and Fixtures; Printing and Publishing; Stone, Clay, Glass, and Concrete; Fabricated Metal; Machinery Except Electrical; Measuring and Analyzing Instruments; and Miscellaneous.

III. The Retail Trade Division

The leading employment sector within this division is Eating and Drinking Places, which both servesand employsmany college students in the area. This is followed by Food Stores and Automotive Dealers and Gas Stations. Rates of change in employment in these three sectors were +6.7, +3.2, and -8.9, respectively.

Retail sales and employment are highly dependent on rates of inflation, levels of aggregate demand, and interest rates on consumer loans. Between the first quarters of 1980 and 1982, levels of all of these variables had adverse affects on the Retail division. However, given steadily low rates of inflation, increasing aggregate demand, and lower interest rates, employment prospects in Retail should be good. Moderate growth in employment is expected in all sectors of the division.

IV. The Construction Division

All major sectors suffered large employment losses between the first quarters of 1980 and 1982. Rates of change in employment were -32.4 in General Building Contracts, -22.5 in Construction Other than Building, and -23.4 in Special Trade Contractors. Employment losses were especially pronounced in this division since the county was in the midst of a building boom before 1980.

Signals in the first quarter of 1983 indicate that at least residential building is making a comeback. The value of residential construction contracts in Larimer County rose by 180 percent between January of 1982 and January of 1983. Home buyers were probably encouraged by news of an impending economic recovery.

As interest rates on consumer loans fall a bit further, and aggregate demand increases, construction activity in Larimer County should resume a moderate pace. Employment gains should be low to moderate in all three sectors of the division.

V. The Finance, Insurance, and Real Estate Division

The division as a whole lost 3.3 percent of its employment between the first quarters of 1980 and 1982. Rates of employment level change in the most important sectors were +4 percent in Banking, -24.7 percent in Real Estate, and +7.1 percent in Credit Agencies Other than Banks. Employment levels in Insurance showed no change.

In 1984, falling interest rates should improve demand for consumer loans, while improved sales of homes and automobiles should lead to improvement in the Insurance sector. Employment in Real Estate will increase slightly with increasing construction, especially in residential building.

VI. The Transportation and Public Utilities Division

Major employing sectors within this division are Communication; Electric, Gas, and Sanitary Services; and Motor Freight Transportation and Warehousing. Percentage changes in employment were +6.1, +8.3 and +12.5, respectively. The division as a whole registered a 10.3 percent increase in employment between the first quarters of 1980 and 1982.

With steady population gains, increasing aggregate demand and lower interest rates in 1984, employment should increase slowly to moderately in all sectors of this division.

VII. The Wholesale Trade Division

Between the first quarters of 1980 and 1982, employment in Durable Goods rose by 39 percent, while employment in Non-Durable Goods fell by 6.8 percent. In Durable Goods, employment gains were especially pronounced in Machinery, Equipment and Supplies.

General increases in aggregate demand and lower interest rates are expected to gain employment prospects in this division in 1984.

VIII. The Agriculture, Forestry and Fishery Division

Small employment gains are expected in Agricultural Services, while employment in Livestock Production and Agricultural Production is expected to remain steady or decline.

IX. The Mining Division

This division accounts for only a small proportion of the employment in Larimer County. All of the jobs are in Oil and Gas Extraction and Mining and Quarrying of Non-Metallic Minerals. In 1984, employment in the former is expected to remain steady or decline, while in the latter sector employment is expected to increase slightly.

The Pueblo Service Delivery Area Consortium

The Pueblo Consortium has been one of the areas in the state that has been hardest hit by the recent recession. The area experienced a negative rate of growth in employment between the first quarters of 1980 and 1982 (-7.3 percent). The Pueblo SMSA lost an additional 1800 jobs between February 1982 and February 1983.

In order to provide some basis for the following major industry division forecasts for the Pueblo Consortium, we will begin by assuming the behavior of five major economic variables. It is herein assumed that these factors will characterize the area's economy in 1984 and 1985.

1) Interest rates on consumer loans will average about 11 percent.

2) The rate of inflation will stay at some low to moderate level (i.e., 2 percent - 7 percent). Energy prices will not rise significantly.

3) Import competition will continue to be significant.

4) Wage increases will keep pace with productivity gains.

5) The level of aggregate demand will rise slowly and moderately at the national level, but will rise only slightly in the Pueblo Consortium.

Divisions are analyzed in the order of their importance to the economy of the Pueblo Consortium, i.e., in terms of number of jobs provided.

I. The Services Division

Service accounted for approximately 33 percent of the jobs in the Pueblo Consortium in the first quarter of 1982. Employment in this division showed a slight 1 percent loss in employment between the first quarters of 1980 and 1982.

The most important sectors in the Service division (in terms of jobs provided) are Health, Educational, and Business. The Health sector posted a 7.5 percent growth rate during the two years between the first quarters of 1980 and 1982. Employment in the Education sector decreased by 5 percent in an overall sense, but employment increased in Business and Secretarial Schools (117 percent) and Vocational Schools (34 percent). Employment in the Business Service sector fell by 21 percent overall. Employment in Social Services fell by 2 percent, led by a 21 percent drop in employment in Job Training and Vocational Rehabilitation Services.

The following Service sectors are expected to show a slight growth in 1984 and 1985: Personal Services, Auto Repair Services, Health Services, Educational Services, and Social Services. The following sectors are expected to remain flat or decline in 1984-85: Hotels and Other Lodging, Business Services, Legal Services, and Membership Organizations.

II. The Retail Trade Division

Approximately 19 percent of the jobs in the Pueblo Consortium in 1982 were in Retail Trade. This division, however, suffered a 6.2 percent loss in employment between the first quarters of 1980 and 1982.

Within this division, the major sectors are Eating and Drinking Places, Food Stores, and General Merchandise Stores, which posted 3.8, -3.9, and -16.0 percent growth rates between the first quarters of 1980 and 1982. The Auto Dealer and Gas Station Sector and the Furniture and Home Furnishings Sector suffered 22 percent and 20 percent declines in growth, respectively.

Recovery in this division in 1984 and 1985 will depend largely upon whether and to what extent steel production picks up on both a local and national basis. An increased demand for automobiles on a national basis would increase the demand for steel and molybdenum, which would in turn return some important jobs to the area. This would provide the area with a much needed increase in consumer spending, which would be necessary in order for employment in the Retail division to begin growing again.

III. The Manufacturing Division

This division suffered a 20.7 decrease in employment between the first quarters of 1980 and 1982.

The major sectors within the Manufacturing division, in terms of numbers employed, are Primary Metals; Stone, Clay, Glass and Concrete Products; and Food Products.

As previously stated, the decline in manufacturing of primary metals reflects the nationwide slump in steel demand. A resurgence of demand for steel will largely determine the extent to which steel employment in the Pueblo Consortium will rebound. However, it is expected that the workforce at CF&I will be substantially smaller than it was before the recession. Most sectors in the Manufacturing division are expected to remain flat in 1984 and 1985. Renewed efforts by private officials in the area to raise venture capital may spark some growth in diversified industries.

IV. The Transportation and Public Utilities Division

The major sectors in this division, in terms of employment, are the Electric, Gas, and Sanitary Services; Communication; and Motor Freight Transportation Sectors. Between the first quarters of 1980 and 1982, employment in Electric, Gas, and Sanitary Services remained steady, while employment in Communications grew by 2.5 percent, and employment in Motor Freight Transportation and Warehousing grew by 14 percent. On the whole, employment in the division grew by 6 percent between 1980 and 1982, but fell by 4.2 percent between the first quarters of 1982 and 1983.

The following sectors within this division are expected to have small increases in employment in 1984 and 1985: Motor Freight Transportation and Warehousing; Air Transportation; Transportation Services; and Communications. The following sectors are expected to remain flat or decline in 1984 and 1985: Local and Suburban Passenger Transportation; U. S. Postal Service; Pipelines; and Electric, Gas, and Sanitary Services.

V. The Mining Division

The Mining division registered a 29 percent drop in overall employment between the first quarters of 1980 and 1982. The decline in this division is largely due to the nationwide slump in the demand for steel.

Recovery of lost employment in this division will depend largely upon a nationwide upswing in the production of durable goods, especially automobiles. This would in turn increase the demand for molybdenum, which is used as a hardening agent in steel.

It is expected that by 1985, steel production nationwide will have risen sufficiently to stimulate minor employment gains in mining.

VI. The Construction Division

The division experienced a slight growth in employment between the first quarters of 1980 and 1982 (2.5 percent). By sector, General Building Contract Construction grew by 11 percent, Construction Other than Building grew by 6.7 percent, and Special Trades Construction fell by 3 percent. Total Contract Construction employment remained steady between the first quarters of 1982 and 1983.

Lower rates on mortgage loans and a low inflation rate should help the Construction division in 1984-1985. It is expected that employment in construction will grow at a slow pace in those years.

VII. The Finance, Insurance and Real Estate Division

Employment in this division fell by 6 percent between the first quarters of 1980 and 1982. By individual sector, employment in Banking remained steady, while employment in Other Credit Agencies rose by about 2 percent, and employment in Real Estate fell by 21 percent.

Without a substantial increase in general economic activity, it is doubtful that employment in this division will improve greatly in 1984 and 1985. Lower interest rates may lead to increased demand for consumer loans and thereby increase employment in Banking and Other Credit Agencies. Employment in real estate brokerage should improve slightly in 1984 and 1985, reflecting a small, steady growth in construction.

VIII. The Wholesale Trade Division

Employment in the division as a whole increased by 4.7 percent between the first quarters of 1980 and 1982. However, all of the increase was in the Non-Durable Goods Sector, which posted a healthy 15.8 percent increase in employment. Employment levels in the Durable Goods Sector fell by 3 percent.

The health of this division depends largely on the level of interest rates and the strength of aggregate demand. As we expect some improvement in both these variables (i.e., lower interest rates and stronger aggregate demand) in 1984 and 1985, employment in the Durable Goods Sector should increase slightly, while employment in Non-Durable Goods should maintain a moderate rate of growth.

IX. The Agriculture, Forestry and Fishery Division

This division provides a very small portion of total employment in the consortium. Employment in the division as a whole fell very slightly between 1980 and 1982. Employment levels are expected to remain flat or decline in 1984.

NOTE: TOTAL NEW HIRES IS THE SUM OF REPLACEMENT DEMAND (INCLUDING TURNOVER), AND GROWTH.

WELD COUNTY SERVICE DELIVERY AREA

Weld County Service Delivery Area

I. The Services Division

The division as a whole registered a 6.1 percent employment growth between the first quarters of 1980 and 1982. The major sectors within this division in terms of numbers employed, are the Educational, Health, and Business sectors. Employment level changes in these sectors were -1 percent, -15.6 percent, and 64.4 percent, respectively. Miscellaneous Services also had a large percentage increase in employment (32.4), while Social Services showed a large 23.2 percent decline.

Increases in aggregate demand and population in Weld County should lead to favorable employment conditions in Services in 1984. However, several sectors are expected to show steady or declining employment levels: Educational, Social, and Membership Organizations. Employment opportunities should be especially favorable in Business Services and Personal Services.

II. The Retail Trade Division

Employment in the divion as a whole fell by 6.3 percent between the first quarters of 1980 and 1982. Most of the sectors within the division lost employment. Employment in Eating and Drinking Places fell by 1 percent, Food Stores lost 7.6 percent, and Auto Dealers and Gas Station employment fell by 14.6 percent.

The decline in employment in 1980-82 was directly attributable to slackened aggregate demand in Weld County. High rates of inflation, high interest rates, and a general recessionary environment nationwide had obvious adverse affects on Retail Trade.

1984 should prove to be a better year for Retail employment. Lower interest rates should lead to increased sales in the Auto Dealer Sector and should also improve demand for Building Materials and Hardware. Increased aggregate demand will lead to improvement in employment in the Apparel, Eating and Drinking Places, and Furniture and Home Furnishings sectors.

III. The Manufacturing Division

The division as a whole suffered a 10 percent reduction in employment levels between the first quarters of 1980 and 1982. One of the hardest hit sectors was Food Production, which registered a 40.4 percent decline in employment. Another sector with large employment losses was Machinery Except Electrical (-20 percent).

On the positive side, employment gains were experienced in Lumber and Wood Products (especially Mobile Homes) which as a sector posted a 15.3 percent gain in employment.

With lower interest rates and increasing aggregate demand in 1984, employment levels are expected to increase in the following sectors: Food; Apparel; Furniture and Fixtures; Printing and Publishing; Stone, Clay, Glass, and Concrete Products; Fabricated Metals Except Machinery; Electrical and Electronic; and Measuring and Analyzing Instruments.

IV. The Finance, Insurance, and Real Estate Division

Employment gains were posted in Banking (+4.8 percent), Credit Agencies Other than Banks (+31 percent), Securities and Commodities (+76 percent) and Real Estate (+16.8 percent). The change in employment for the division as a whole was +7.1 percent.

With expected population growth, lower interest rates and increased consumer spending, all sectors within this division should experience moderate employment gains in 1984 and 1985.

V. Construction

Employment in the division as a whole fell by 11 percent between the first quarters of 1980 and 1982. Employment with General Building Contractors fell by 12.5 percent and Special Trades Contractors lost 15 percent of their 1980 employment levels. Construction Other than Building showed a 9.3 percent gain in employment.

At the beginning of 1983, there were strong signals indicating excellent prospects for growth in construction in Weld County. The value of construction contracts improved substantially between February 1982 and February 1983. With declining interest rates, high overall employment levels and increasing aggregate demand, employment levels in construction should grow moderately in 1984.

VI. The Transportation and Public Utilities Division

Major sectors of employment within this division are Motor Freight Transportation and Warehousing; Communication; and Electric, Gas, and Sanitary Services. Changes in employment in these sectors were -5.1, +11.5, and 0, respectively.

The division in general was hurt by high interest rates and high energy costs in 1980 and 1981. High energy costs and heightened competition led to employment losses in Motor Freight Transportation, while conservation efforts and high prices led to decreased demand for electricity and natural gas.

Declining interest rates, low rates of inflation and economic growth will contribute to increased employment in all sectors of the Transportation and Public Utilities division in 1984. Employment growth should be moderate in Local and Suburban Passenger Transportation, Air Transportation, and Motor Freight Transportation, while employment in Transportation Services; Communication; and Electric, Gas, and Sanitary Services should experience small rates of growth.

VII. The Wholesale Division

Employment in Durable Goods rose by 13 percent between the first quarters of 1980 and 1982, while employment in Nondurable Goods fell by 4.2 percent.

Within the Durable Goods sector, employment growth in percentage terms was especially marked in Electrical Goods (+97.4 percent) and Lumber and Other Construction Materials (+35.2 percent). Employment in Farm and Garden Machinery fell by 36.2 percent. Of the major employers in Nondurable Goods, employment in Miscellaneous Goods fell by 30.3 percent, while employment in Groceries and Related Products fell by 3.8 percent.

Although this division employs relatively small numbers of people in Weld County, employment is expected to increase in both Durable and Nondurable Goods in 1984. Durable Goods will be helped by lower interest rates, while a general increase in aggregate demand should spur employment in Nondurable Goods.

VIII. The Agriculture, Forestry and Fishery Division

Weld County is one of the most agriculturally productive counties in the Nation, based on value of farm product sales. It excels in both crop production and livestock production.

However, farm income in Colorado has been falling steadily since 1975. Factors contributing to this decline have been high interest rates, high energy costs, and increased international competition. The drop was especially pronounced between 1980 and 1982, when net farm income fell from $349 million to $88 million.

Consequently, employment in Agriculture fell by 13.3 percent between the first quarters of 1980 and 1982. Percentage loss was most dramatic in Crop Production, where employment fell by 52.3 percent. Agricultural Services showed a surprising 77.8 percent gain in employment. This may be explained by the fact that more farmers, mainly because of the high cost of farm equipment, are hiring specialists to carry out some essential duties such as crop planting and preparation of crops for market.

Employment levels in Agriculture are quite difficult to predict. Besides accounting for "economic" variables, such as interest rates and inflation rates, one must also consider variables that are even more unpredictable, such as export controls and weather. However, unless the level of exports or prices increase dramatically in the next two years, employment levels in Crop Production are expected to remain steady or decline in 1984. Employment in Agricultural Services should increase slightly, due to the trends that were discussed earlier. Finally, a general increase in aggregate demand should help employment levels in Livestock Production.

IX. The Mining Division

The vast majority of Weld County employment in this division is in the Oil and Gas Extraction sector. Employment in this sector increased by 69.5 percent between the first quarters of 1980 and 1982. However, soft oil and gas prices in 1982 and early 1983 had a diminishing effect on this employment boom. In 1984, it is expected that employment in this division will remain steady or decline.

APPENDICES

A NOTE ON THE DATA

The analyses of each Service Delivery Area is based on ES-202 data, which is supplied to the State of Colorado by all employers who are subject to the Colorado Employment Security Act. One of the items available in this data base is the number of persons working for each employer. These numbers are arranged by the Standard Industry Classification code and then aggregated.

With the exception of the table being presented on page 42, all employment analyses allocate Government employment to those private sector industries where comparable activity is being conducted. For example, public sector education is allocated to the major division of Services, and further to the 2-digit SIC Educational Services. Public Administration employment, since it has no private sector counterpart, was not allocated and is not a part of any employment analyses except on page 42, where it is included in the Government division.

Because most Agricultural, Livestock and Crop Production employment is not covered under the Colorado Employment Security Act, the ES-202 series cannot reflect this employment. This point should be kept in mind when reviewing the Agriculture, Forestry, and Fishery division comment under the Service Delivery analysis. Total Agricultural employment is reflected in the Agricultural estimate provided in the table on page 42.

The National Outlook, Colorado Outlook and Service Delivery Area Outlooks were analyzed by different staff economists. Minor differences of opinion, therefore, may be reflected in each of these presentations.

METHODOLOGIES USED FOR YOUTH POPULATION AND LABOR FORCE - 1982 ANNUAL AVERAGE

Population : Estimates based upon actual 1980 census by age by county projected to 1982 based upon the census percent change from 1970 to 1980 for each county.

Disadvantaged Population : Estimates based upon 1980 census of total persons below poverty status. Developed ratio of total persons below poverty status to the total population in each county. Applied this ratio to the total estimated youth population in each county to obtain number of youth below poverty status. The assumption is that there are approximately the same ratio of youth below poverty status as the total population, since poverty status is identified by household income.

Employment and Unemployment: Estimates based upon ratios developed for total civilian employment and total civilian unemployment by county, comparing 1980 census with March/April 1980 average CPS data. Ratios developed were then applied to current CPS data on employment and unemployment to obtain comparable current totals for each county.

Current national civilian labor force ratios from BLS CPS data on youth 16-21 years of age were then developed and applied to the employment and unemployment totals for each county. This methodology assumes that approximately the same national ratios of employment and unemployment of youth also exists in Colorado. Census data on youth labor force is not yet available for a comparison.

Unemployed Disadvantaged Youth : Developed ratio of total disadvantaged applicants to total applicants not working (unemployed) from fiscal year 1981 ESARS (table 06). This ratio was then applied to each county total unemployed figure within each Job Service Center administrative area, to determine total disadvantaged unemployed by county. ESARS fiscal year 1982 table A18 was then used to develop ratio of disadvantaged youth 16-21 to total disadvantaged applicants. This ratio was then applied to the total county disadvantaged unemployed figure to obtain the number of unemployed disadvantaged youth.

ELIGIBLE LABOR SURPLUS AREAS FOR BIDDING ON FEDERAL CONTRACTS

BACKGROUND

Employers located in eligible labor surplus areas, as determined by the Department of Labor, and who meet other criteria, are entitled to preference in bidding on Federal procurement contracts.

The purpose of the labor surplus area procurement preference is to help guide a portion of the government's procurement dollars into those areas where people are in most severe economic need, e.g., areas with the highest unemployment.

The concept of targeting Federal procurement into areas of high unemployment dates back to the early 1950's. There was concern among government officials at the time that high unemployment rates and low utilization of plant and equipment in some areas would lead to erosion of the mobilization base and adversely affect production during the Korean Conflict. There was also concern that the cost of constructing new plants and relocating workers would cause an unnecessary drain on resources.

The Office of Defense Mobilization studied this problem and in February 1952 issued Defense Manpower Policy Number Four (DMP-4), implementing the idea of targeting Federal procurements to labor surplus areas. The program eventually became the responsibility of the Federal Preparedness Agency within the General Services Administration.

The labor surplus area program was largely unsuccessful in producing contract set-asides to employers in such areas because the program lacked a statutory base. This was changed in August 1977 with the enactment of Public Law 95-89 which amended the Small Business Act. Public Law 95-89 authorizes Federal agencies to "set-aside" contracts for competition among firms which agree to perform a substantial portion of the production of the contract in labor surplus areas. Contracts may be set-aside when an agency determines that offers will likely be obtained from a large enough number of eligible firms to permit the awards to be made at reasonable prices.

During the Urban and Regional Policy Group's review of Federal programs in 1977-78, the labor surplus area program was identified as one which had potential for providing relief for distressed areas. In March 1978, the General Services Administration was directed to work with each Federal agency to set targets for labor surplus area contracts, monitor agency performance, and report to the President every six months on the progress of each agency. These principles were contained in Executive Order 12073 which was signed on August 16, 1978.

In addition, Executive Order 12073 assigned to the Department of Labor the responsibility for classifying labor surplus areas. This was a continuation of the Labor Department's responsibilities since the inception of the program under DMP-4 in the early 1950's. The Department also has responsibility for classifying such areas under Executive Order 10582 which implements the Buy American Act.

CLASSIFICATION CRITERIA

Under the Department of Labor's classification procedures, an area is classified as a labor surplus area if the unemployment rate is at least 1.20 times the national unemployment rate during the previous two calendar years.

The procedures also provide for the classification on the basis of exceptional circumstances. Under these procedures, if an area does not meet the criteria necessary for classification as a labor surplus area, the criteria can be waived and the area classified when there has been a sudden rise in the unemployment in the area (other than seasonal or short term) that is not reflected in the area's data for the reference period. Such situations can occur as a result of natural disasters, plant closings of major employers, etc. which have a substantial impact on the area's employment and unemployment. In situations where such exceptional circumstances occur, the area can be classified as a labor surplus area upon petition from the appropriate State employment security agency. The addresses of the State employment security agencies are provided on the inside back cover.

Labor surplus areas are classified on the basis of civil jurisdictions, i.e., counties or county equivalents, as well as all cities with a population of at least 50,000. In four states (Michigan, New Jersey, New York and Pennsylvania), townships of 50,000 or more population are also eligible for classification as labor surplus areas. In New England, the labor surplus area classifications for Maine, New Hampshire, and Vermont are based on county data while in Connecticut, Massachusetts and Rhode Island, where counties have very limited or no government function, the classifications use towns as county equivalents. By classifying labor surplus areas in this way, i.e., in terms of civil jurisdictions rather than labor market areas, funds can be directed to specific localities with high unemployment rather than to all jurisdictions in a given metropolitan area, not all of which may suffer from the same degree of unemployment.

The eligibility status of labor surplus areas is determined annually under the classification procedures. The annual listings are effective each June 1 and remain in effect for the following 12 months.

The reference period used in making the classifications is an average of the previous two calendar years. By using an average of 24 months of data, contracts can be targeted in areas experiencing high structural unemployment.

The two-year reference period used in classifying the current list of labor surplus areas was January 1980 through December 1981. The national average unemployment rate during this reference period was 7.5 percent. Areas are included in the annual listing if their average unemployment rate during the reference period was 9.0 percent or more (i.e., 1.20 times the national rate). The present list of labor surplus areas will remain in effect through May 31, 1983.

LABOR SUPPLY CLASSIFICATIONS AND SUMMARY LABOR FORCE DATA FOR MAJOR AND OTHER LABOR AREAS, FIRST QUARTER 1982

LABOR SUPPLY CATEGORIES

Each quarter the Department of Labor classifies almost 300 labor market areas (including 150 major employment centers) into one of the six labor supply categories shown below.

Labor Supply Category	Description	Unemployment Rate 1/
Group A	Critical shortage of labor	Less than 1.5%
Group B	Serious shortage of labor	1.5 to 2.9%
Group C	Moderate shortage of labor	3.0 to 5.9%
Group D	Moderate surplus of labor	6.0 to 8.9%
Group E	Serious shortage of labor	9.0 to 11.9%
Group F	Critical surplus of labor	12.0% or more

1/ Ratio of unemployment to area's total labor force.

SOURCE: Area Trends in Employment and Unemployment
USDOL, ETA, January 1982

BACKGROUND

The categories used in classifying major labor areas according to the adequacy of supply of labor represent a continuation of a system which has been in operation for over 25 years. Although modifications have been made in the system from time to time, the present labor supply categories as indicated above are basically unchanged since May 1955.

The labor supply classifications provided cover the first quarter of 1982. These classifications are based upon the average labor force data for the months of January, February and March 1982.

LABOR MARKET AREAS

Unlike the classification of labor surplus areas which are done on the basis of civil jurisdictions, the labor supply classifications are done on a labor market area basis.

A "labor market area" means a geographic area in which there is a concentration of economic activity of labor demand and in which workers can readily change jobs without changing their place of residence.

The largest labor market areas are referred to as major labor areas. Major labor areas usually have at least one central city with a population of 50,000 or more. In most instances, boundaries of major labor areas coincide with those of the Standard Metropolitan Statistical Areas.

Geographical boundaries of all classified areas are listed in the Employment and Training Administration publication entitled Directory of Important Labor Areas. Requests for copies of the Directory should be addressed to the Employment and Training Administration (TPPL), Room 8028, 601 - D Street, N.W., Washington, D.C. 20213.

COMMONLY USED TERMS, ACRONYMS, AND ABBREVIATIONS

AFDC - Aid to Families with Dependent Children

All other nonag - nonagricultural self-employed, unpaid, family, and domestic workers.

Applicants available - all applicants available at end of period plus all new, new partial, and renewal applicants.

BLS - Bureau of Labor Statistics

CDET - Colorado Division of Employment and Training

CETA - Comprehensive Employment and Training Act

Civilian labor force - all civilian uninstitutionalized individuals, 16 years of age or older, employed or unemployed, by place of residence.

Civilian labor force participation rate - the ratio of the civilian labor force to the civilian uninstitutionalized population. Participation rates are usually published by sex-age groups and often are cross-classified by other demographic characteristics.

CPS - Current Population Survey

Continued weeks claimed - the sum of weeks claimed for partial or total unemployment under the unemployment compensation program.

Counseling interview - a face-to-face interview in which an employment counselor or employment counselor trainee (1) helps an applicant resolve problems of occupational choice or change or job adjustment and (2) obtains and records on the application and/or other appropriate applicant records one or more of the following: (a) a summary statement describing the counseling problem; (b) additional information contributing to a better definition of the problem or its solution; (c) a statement of an occupational plan or recommendation for the solution of the problem; and (d) when pertinent, a statement elicited in the course of follow-up concerning progress in carrying out the counseling plan and any further services needed.

Deregistration - denotes that a WIN registrant is being separated from the program for one of the following reasons: (1) employed after registration, off AFDC; (2) employed volunteer, not off AFDC; (3) applicant not eligible for AFDC; (4) applicant exempt from registration for work; (5) applicant sanctioned (removed for refusal to participate in program without good cause); (6) applicant off AFDC for non-WIN-related reasons such as death, moving, etc.

DOL/ETA - Department of Labor, Employment and Training Administration

DOT - Dictionary of Occupational Titles

Employed - those individuals, 16 years old or older, who did any work at all during the monthly survey week; includes full-time, part-time, and temporary workers. Individuals are also counted as employed if they have jobs but are temporarily absent from work.

Executive order - a formal document issued by the President of the United States (or in Colorado, the Governor) which has the force of law. Executive orders are compiled in Title 3 of the Code of Federal Regulations.

Filled opening - a job opening for which an applicant referred by a local office has been hired by an employer and has entered the job.

HEW - the Department of Health, Education, and Welfare (now split into the Department of Health and Human Services and the Department of Education).

Individuals placed - initial referrals, hirings, and entrance into jobs by applicants during a fiscal year. These activities together comprise "placement transactions".

Initial claim - an application for a determination of eligibility for benefits which certifies the beginning date (or the continuance into a new benefit year) of a period of unemployment.

JTPA - Job Training Partnership Act

Job Development contact - the process of soliciting a public or private employer's order for a special applicant for whom the local office has no suitable opening currently on file.

LMA - Labor market area

New applicant - a person filing an application card (Form 511A) for whom a local Job Service Center has no previously-prepared application card or whose previous application has become obsolete.

Nonagricultural (nonag) wage and salary - refers to nonagricultural-established employment.

Not in labor force - includes all civilians 16 years old and over who are not classified as employed or unemployed.

Obtained employment - employment not meeting the definition of "placement" (g.v.). This term is applied to WIN registrants only.

Placement - the hiring by a public or private employer of an individual referred by the employment office for a job or an interview, provided that the employment office completed all of the following steps: (1) prepared a job order form prior to referral, except in the case of a job development effort on behalf of a specific applicant; (2) made prior arrangements with the employer for the referral of an individual or individuals; (3) referred an individual who had not been specifically designated by the employer, except for referrals on agricultural job orders for a specific crew leader or worker; (4) verified from a reliable source, preferably the employer, that the individual had entered on a job; and (5) appropriately recorded the placement.

Referral - the act of determining that an applicant is qualified for a job opening and arranging an interview for the applicant with the employer.

Renewal - the transfer of an applicant from the inactive file to active status; that is, he/she is again considered to be available for referral to job openings or employability-development services.

SIC - standard industrial classification

SMSA - standard metropolitan statistical area

Testing - administering a test (standardized means of measuring an individual's possession of, interest in, or ability to acquire job skills or knowledge) to an applicant.

Unemployed - those individuals 16 years of age or older without a job who are available for work and actively seeking work.

WIN - Work Incentive Program
